AGILE IS A JOURNEY THAT BEGINS WITH A SINGLE STEP

We're not as agile as we think or would like to be ... yet.

Only **42%** of companies are all agile

But the (sort of) good news is

75% of companies are at least **50%** agile

So why is it difficult to implement Agile Testing?

But what about skills? Do teams have the right ones to perform Agile Testing?

58% of teams are reasonably acquainted with Agile Testing

Respondents' anecdotes ...

There is a lack of understanding that the related QA effort is more long term, and that tests span across sprints and span across releases.

No recognized process for testing within Agile teams. Most teams still fall into shorter waterfall or no testing process at all.

Unless a proper structure is chieived starting from Business to IT, we'll be looking at a probable downfall of quality.

Lack of end-to-end testing during earlier builds introduces functional changes at the end which presents more headaches for development teams and subsequently harder for testing.

Leadership not sharing the full vision up front, team commits to a date, we receive MANY extra requirements and still need to make the due date

*Based on survey conducted by Zephyr in March/April 2015.

Zephyr is a leading provider of on-demand, real-time enterprise test management solutions, offering innovative applications, seamless integrations and unparalleled, real-time visibility into the quality and status of software projects. Zephyr products are the fastest growing agile test management products in the world, with more than 5000 global customers in 100 countries. Their feature rich products address today's dynamic and global needs across a variety of industries including finance, healthcare, media, mobile, IT services, and enterprise software. Zephyr is headquartered in Newark, CA with offices in Europe and India.
